```
GPIO.cleanup()

# = = = = = = = = = = = = = = = = = = = = = = = = = = = = = = = = = = = = = = = = =

if_name__ = = "__main__":

main()
```

7. Result :

PRACTICAL-20

1. Aim

install Windows IoT 10 core on Raspberry pi and run the demo program.

2. Prior Concepts

i) Basic computer architecture and operating systems.

ii) Windows operating system basics.

iii) Microprocessor and microcontroller fundamentals.

iv) Basic networking concepts (IP address, Ethernet, Wi-Fi).

3. New Concepts

i) Windows 10 IoT Core operating system.

ii) Deployment of Windows lot on Raspberry Pi.

iii) Using Windows IoT Dashboard.

iv) Universal Windows Platform (UWP) applications.

4. Procedure

1 Go to the Windows 10 developer center.

2 Click Get Windows 10 IoT Core Dashboard to download the necessary application.

Input IMAGE(4)

3. Writing Windows IoT Core Image to SD Card

Input IMAGE(3)

4. Windows IoT Core Startup Screen

Input IMAGE(3)

5. Raspbrrry Pi Appearing in IoT Dashboard

Input IMAGE(5)

6. Raspberry Pi Device Portal in Browser

Input IMAGE(4)

5. Demo Application:

Display a simple message on the Raspberry Pi screen. (C# UWP):

```
using Windows.UI.Xaml;

using Windows.UI.Xaml.Controls;

namespace HelloloT

{

public sealed partial class MainPage: Page
{
public MainPage()
{
this.InitializeComponent();
TextBlock txt = new TextBlock();
txt.Text = "Hello Windows IoT Core!";
txt.FontSize = 40;
this.Content = txt;
        }
    }
}
```
